

SOUVIK BISWAS

Full-Stack Developer · New Grad 2026

souvikbiswas.dev@gmail.com · github.com/souvik-biswas-dev

SUMMARY

Final-year Computer Science student and full-stack developer experienced in building production-grade web applications with the MERN stack, Next.js, and Go. Shipped a live multi-tenant platform serving 1,000+ users, with hands-on experience in AI integration, Docker, and cloud deployment.

SKILLS

Languages: C++, C#, JavaScript, TypeScript, Go

Web & App: MERN Stack, Next.js, React, SvelteKit, React Native (Expo), Tailwind CSS

Backend & Databases: Node.js, Express, Go (Gin), MongoDB, Mongoose, Redis, BullMQ

DevOps & Cloud: AWS, Docker, Kubernetes, Docker Compose, Caddy Proxy

AI & Integrations: Google Gemini API, LangChain, OpenAI API, Meta WhatsApp Cloud API, Razorpay

Core CS: Data Structures and Algorithms (200+ problems solved), Low-Level Design, Distributed Systems, DBMS, Computer Networks, Cloud Computing, Cryptography and Network Security

PROJECTS

School Portal · Multi-Tenant School ERP

Next.js, React, MongoDB, Redis, Docker, Gemini API

- Architected and shipped a multi-tenant web platform solo for a startup, now serving **1,000+ active students** with strict tenant isolation enforced at the ORM layer via AsyncLocalStorage and a custom Mongoose plugin.
- Built an AI-powered attendance pipeline using **Google Gemini** OCR that extracts roll-wise data from photographed registers and validates it against the class roster, reducing manual attendance entry by 100%.
- Engineered a reliable background-job system with **BullMQ and Redis** for Meta WhatsApp API push notifications and Dockerized cron jobs for idempotent per-student Razorpay billing.

FinVault · Financial Transaction System

Node.js, Express, MongoDB, SvelteKit, TypeScript, Docker

- Engineered a double-entry bookkeeping ledger with append-only, immutable transaction entries to guarantee a tamper-evident audit trail across all financial records.
- Implemented idempotency keys on transfers to prevent duplicate transactions and used computed balances over a stored field to eliminate data drift.
- Hardened the REST API with JWT authentication (HttpOnly cookies, strict SameSite), bcrypt password hashing, Helmet, CORS, rate-limiting (20 requests per 15 minutes), and graceful shutdown handling.

PrepSenseAI · AI Interview Prep Platform

React, Express, Gemini API, MongoDB, Puppeteer, Zod

- Built a full-stack platform that parses a user's PDF resume against a target job description to generate a personalized interview preparation strategy.
- Integrated the Google Gemini SDK with **Zod** schema validation to enforce strict JSON outputs, generating technical and behavioral questions with a color-coded skill-gap analysis.
- Developed a server-side HTML-to-PDF rendering pipeline with **Puppeteer** to auto-generate ATS-optimized resumes from AI feedback, cutting resume turnaround to under 30 seconds.

StreamSense · AI-Enhanced Streaming Platform

React, Go (Gin), MongoDB, LangChain, OpenAI API

- Built a highly concurrent REST API in **Go (Gin)** backed by MongoDB to power an AI-enhanced movie streaming platform supporting multiple concurrent users.
- Designed a stateless authentication system using JWT access and refresh token rotation in secure HttpOnly cookies to mitigate XSS and CSRF attacks.
- Integrated **LangChain** and OpenAI API for an automated sentiment analysis pipeline that maps admin reviews to ranking scores for genre-based recommendations.

EDUCATION

Siliguri Institute of Technology

Bachelor of Technology in Computer Science and Engineering · CGPA: 7.5/10

May 2026
