

SOUVIK BISWAS

Full-Stack Developer · New Grad 2026

souvikbiswas.dev@gmail.com · github.com/souvik-biswas-dev

SUMMARY

Final-year Computer Science student and full-stack developer experienced in building production-grade web applications with the MERN stack, Next.js, and Go. Shipped a live multi-tenant platform serving 1,000+ users, with hands-on experience in AI integration, Docker, and cloud deployment.

TECHNICAL SKILLS

Languages: C++, C#, JavaScript, TypeScript, Go

Web & App: MERN Stack, Next.js, React 19, SvelteKit, Expo (React Native), Tailwind CSS

Backend & Databases: Node.js, Express.js, Go (Gin), MongoDB, Mongoose, Redis (BullMQ)

DevOps & Cloud: AWS, Docker, Kubernetes, Docker Compose, Caddy Proxy

AI & Integrations: Google Gemini API, LangChainGo, OpenAI API, Meta WhatsApp Cloud API, Razorpay

Core CS: Data Structures & Algorithms (200+ solved), Low-Level Design, Distributed Systems, DBMS, Computer Networks, Cloud Computing, Cryptography & Network Security

PROJECTS

School Portal · Multi-Tenant School ERP

Next.js, React, MongoDB, Redis, Docker, Gemini

- Architected and shipped a multi-tenant web platform solo for a startup, now serving **1,000+ active students** with strict tenant isolation enforced at the ORM layer via AsyncLocalStorage and a custom Mongoose plugin.
- Built an AI attendance pipeline using **Gemini 2.5 Pro** OCR that extracts roll-wise data from photographed registers and validates it against the class roster, eliminating manual entry.
- Engineered a reliable background-job system with **BullMQ/Redis** for Meta WhatsApp API notifications and Dockerized cron jobs for idempotent per-student Razorpay billing.

Backend Ledger · Financial Transaction System

Node.js, Express 5, MongoDB, SvelteKit, TypeScript, Docker

- Engineered a double-entry bookkeeping ledger with append-only, immutable transaction entries to guarantee a tamper-evident audit trail.
- Implemented idempotency keys on transfers to prevent duplicate transactions and used computed balances over a stored field to eliminate data drift.
- Hardened the REST API with JWT (HttpOnly, strict SameSite), bcrypt, Helmet, CORS, rate-limiting (20 req/15 min), and graceful shutdown handling.

InterviewAI · AI Interview Prep Platform

React 19, Express 5, Gemini Flash, MongoDB, Puppeteer, Zod

- Built a full-stack platform that parses a user's PDF resume against a target job description to generate a personalized interview-prep strategy.
- Integrated the Google Gemini SDK with **Zod** schema validation to enforce strict JSON outputs, generating technical/behavioral questions and a color-coded skill-gap analysis.
- Developed a server-side HTML-to-PDF rendering pipeline with **Puppeteer** to auto-generate ATS-optimized resumes from the AI's feedback.

StreamSense · AI-Enhanced Streaming Platform

React (Vite), Go (Gin), MongoDB, LangChainGo, OpenAI

- Built a highly concurrent REST API in **Go (Gin)** backed by MongoDB to power an AI-enhanced movie streaming platform.
- Designed a stateless auth system using JWT access/refresh token rotation in secure HttpOnly cookies to mitigate XSS and CSRF attacks.
- Integrated **LangChainGo** and OpenAI for an automated sentiment-analysis pipeline that maps admin reviews to ranking scores for genre-based recommendations.

EDUCATION

Siliguri Institute of Technology

B.Tech in Computer Science and Engineering (Final Semester) · CGPA: 7.5

Expected 2026
